## Anonymous

read this json file contents:

```
{
  "client_id": "btpv5qLtnA7Q4eod6Wjxvg",
  "client_secret": "18NHMG4Z1dtF2lFOaxHnc_SKsDm4DA",
  "user_agent": "script by u/Zealousideal-Land259",
  "redirect_uri": "http://localhost:8080/",
  "refresh_token": "13827801524317-nhdq8JWwjjeUfq-nPxKhSpn32MybCQ"
}
```

into an object like this in python:

```
reddit = praw.Reddit(
    client_id="CLIENT_ID",
    client_secret="CLIENT_SECRET",
    password="PASSWORD",
    user_agent="USERAGENT",
    username="USERNAME",
)
```

## ChatGPT

You can create a Python script to read the JSON file and then use its contents to instantiate a `praw.Reddit` object.

Here's how you can do it:

python

 Copy code

```
import praw
import json

# Load the JSON file
with open('reddit_credentials.json') as f:
    credentials = json.load(f)

# Extract the values from the JSON
client_id = credentials['client_id']
client_secret = credentials['client_secret']
user_agent = credentials['user_agent']
```
